**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/28/2010 has been entered.
2. This Office Action is in response to the Amendment filed on 9/28/2010. Claims 2, 4, 7 and 9 are now pending.

***Allowable Subject Matter***

3. Claims 2, 4, 7 and 9 are allowed.
4. The following is an examiner's statement of reasons for allowance:  
The present claims are allowable over the closest reference: Ota et al. (US Patent 7,183,347).

Ota et al. disclose rubber gloves made by dip molding molded from a conjugated diene based rubber latex obtained by copolymerization of a conjugated diene monomer and an ethylenically unsaturated acid monomer, wherein the polymerization initiators include an inorganic or organic peroxy compound, the dip molding is crosslinked by a

water-soluble multivalent metal salt, and using substantially none of any of a sulfur-containing vulcanizing agent, a vulcanization accelerator for the vulcanizing agent, and zinc oxide, and wherein the conjugated diene based rubber latex is obtained by copolymerization of 30 to 90 wt % of the conjugated diene monomer, 0.1 to 20 wt % of the ethylenically unsaturated acid monomer, and 0 to 69.9 wt % of an additional ethylenically unsaturated monomer that can copolymerize with these monomers, and wherein the solid content of the composition is 30 wt.% (claims 1, 2, Example 9, col. 1, line 17, col. 4, lines 40-43).

Thus, Ota et al. do not teach or fairly suggest the claimed glove obtained by dip-forming a composition obtained by adding a dibenzoyl peroxide to a conjugated diene rubber latex, wherein the conjugated diene rubber latex is obtained by emulsion polymerization of a monomeric mixture comprising 55 to 81 weight-% of a conjugated diene monomer, 2 to 8 weight-% of an ethylenically unsaturated acid monomer, and 11 to 43 weight-% of another monomer capable of copolymerization with these, using an inorganic peroxide as a polymerization initiator, wherein the concentration of solids content in the dip forming composition is 20 to 40 weight-%, and wherein the dip-forming composition contains neither sulfur nor curing accelerator.

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1762

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
